

## Sub-Contract Machining of Medical Components

**...because we do what we are good at.**

Thanks to our capacity and our 25 years experience our customers benefit from product knowledge and global partnership. We're able to provide a complete service from a single source.

We develop a complete technological solution. From the original concept to the finished product.

- The first part is the X-Ray Wire for which we specially developed a tool to produce them as efficient as possible. Its purpose is to make the plastic mussel visible.
- To continue we deliver them in a secure and specifically designed fixture that facilitates ultrasonic cleaning, transport & Kanban storage
- The finished assembly is ready for operation. The implant is now locatable in the body with x-ray.
